Declaration of Individual Work and AI Use

SWE 3513 Artificial Intelligence, Individual Assignment 2: Musanze Harvest Intelligence Service

Name: Manzi Kassim

Registration number: 25/27935

Verification code: AI-A2-7935

Repository: https://github.com/manzikassim/AI_A2_2527935

Final code commit hash: 4c68a0d

I declare that I submitted this work as my own individual assignment and that the dataset, metrics, plots and model behaviour in it were produced by running the code with my own seed, 7935.

I used Claude (Anthropic) as a coding and writing assistant. It generated first versions of the code, tests, README and the report structure, and gave me step-by-step instructions. I ran, tested and debugged the system on my own computer. The interpretations of the regression error, the classification error and the cluster in my report, and my reflection, are written in my own words. Details are in evidence/AI_USE.md.

I understand the code well enough to explain it and modify it when asked, and I understand that mismatched seeds, copied fingerprints or unexplained code may be referred for academic integrity review.

The dataset is synthetic. The service is a classroom decision-support prototype and must not replace an agronomist or be used for finance, insurance or public-service decisions.
